

ThermaMax Saves Money!

LESS overhead money spent EQUALS MORE bottom line profit saved!

BENEFITS

[Immediate return on your investment](#)

ThermaMax will lower air conditioning, heat pump, and refrigeration systems' operating costs by the second month. In most applications cost-effective ThermaMax will pay for itself in one year or less. ThermaMax's benefits last for the life of the system. ThermaMax is laboratory and customer proven to cut power usage in compressor systems.

[Easy, inexpensive installation](#)

The same fast, simple procedure can be used to install ThermaMax in any type of compressor-driven system.

[Small amount - real improvement](#)

One unit of ThermaMax per ton of air conditioning (12,000 BTU) is required in systems smaller than ten tons. Units larger than ten tons generally require about 10% of the oil capacity. This is dependent upon the make and type of unit and should be evaluated on an individual basis.

[U.S. Dept. of Energy recommendation](#)

The Federal Energy Management Program of the U.S. Department of Energy recently tested PROA's and recommends, in a Federal Technology Alert Bulletin, that PROA's be installed in all federal facilities. ThermaMax protects your compressor system.

[Restoration of older Systems](#)

ThermaMax will literally clean and restore older systems. All of the components of ThermaMax will help extend equipment life and reduce maintenance costs.

[Increased compressor efficiency](#)

ThermaMax will improve efficiency and increase heat transfer ("Q" factor) capability. This will decrease the time the compressor actually runs to produce the same cooling level.

Acid scavenger

Acids form when moisture combines with chlorine or one of the other halogen compounds that can break down inside the compressor due to heat or stress. ThermaMax's acid scavenger finds and ties up free acids if they occur in a system, rendering them harmless to the sensitive components in the compressor and motor bearings.

Advanced lubrication

ThermaMax greatly increases lubricity, bonds to the metal surfaces to aid at start-up and extends the life expectancy of the compressor oils. This means longer periods between oil changes and reduced annual maintenance costs.

Oil compatibility

ThermaMax is compatible with all compressor oils, both standard and synthetic, without reformulation.

Refrigerant compatibility

ThermaMax is compatible with currently used refrigerants, including ammonia and propane, and all new replacement refrigerants, including R-134a.

Oil reclamation

If a compressor oil change becomes necessary, it is not necessary to completely re-treat with ThermaMax. Add only a fraction of the original quantity to assure full benefit of ThermaMax protection.

Refrigerant reclamation

If it becomes necessary to reclaim the refrigerant, there is no need to re-treat with ThermaMax. It will still be in the system after the refrigerant is reclaimed.

SAVE 10%-20% ON AIR CONDITIONING, HEAT PUMP, AND REFRIGERATION POWER USAGE

The ONLY Product On Today's Market ORIGINALLY Formulated As A Polarized Refrigerant Oil Additive (PROA) For Air Conditioning, Heat Pumps, And Refrigeration.

The ThermaMax warranty

ThermaMax is warranted by [Chiller Services](#), to be free from defects in material and workmanship. The warranty includes protection against damage to any equipment treated with ThermaMax when properly installed.

[Equipment manufacturer's warranties](#) ThermaMax meets or exceeds all equipment manufacturer's warranty standards for compressor oil.

EXCLUSIVE DISTRIBUTORS FOR THE BAHAMAS:

POWERSAVE INTERNATIONAL

Total Energy Solutions

Bernard Road (opp. Poinciana Inn)

P.O. Box EE-15232

Nassau, Bahamas

Tel/Fax: (242) 393-8814
